## HEAVY DUTY COPPERTUBE TERMINALSTYPE 2AM

for copper conductors

File no. E125401

## Description:

- 2A-M series lugs are manufactured from electrolytic copper tube Cu-OF CW008A conform to UNI EN I3600:2003. They feature a double length barrel for enhanced electrical and mechanical performance in heavy duty applications.
- Cembre lugs are annealed to guarantee optimum ductility which is an absolute necessity for connectors which will have to withstand the severe deformation arising when compressed and any bending of the palm during installation.
- In applications subject to vibration, terminals still have to perform a reliable connection, annealing plays a vital role in avoiding cracking or breaks between the barrel and palm.
- The absence of an inspection hole prevents the entry of water or moisture into the crimped joint making these terminals suitable for outdoor applications.
- Lugs are electrolytically tin plated with a minimum thickness of $3 \mu \mathrm{~m}$ to avoid oxidation. 2A-M series lugs form an important part of Cembre crimping systems for power carrying conductors.

## Each connector is marked as follows:

- Cembre trade mark and reference number.
- Nature and size of conductor ( $\mathrm{mm}^{2}$ ).
- $\varnothing$ stud (mm).

## Markings:
